

USER MANAGEMENT

Provisioning made easy

You can provision your users the way you like, upload a CSV/XLS, Enable Self-Registration, activate accounts manually or event link with your LDAP/Active Directory identity provider in order to sync user accounts.

A wide range of user management tools is available for administrator(s) in order to manage accounts, activate/deactivate users, update profiles or even conduct a one-to-one instant messaging communication.

Audit Logs

Monitor all the events and actions through the audit trail and history modules.

Review access and download Excel reports listing events such as database access, profile update, login, search and content retrieval or file downloads.

Powerful Role Management

There are over 40 different roles accessible for administrators. You can for example, group certain users and enable report generation for them and then easily configure another subset of users to have full administrative roles.

Drill down to individual user profiles

You can drill down to the individual user account profiles and view their activity through various charts and tables. All the information available on the individual profile dashboards can be exported and filtered by date range.
